60 Degree V6 Engines

The General Motors 60° V6 engine family was a series of 60° V6 engines which were produced for both longitudinal and transverse

Access Free 60 Degree V6 Engines

applications. All of these engines are 12-valve cam-in-block or overhead valve engines, except for the LQ1; which uses 24 valves driven by dual overhead cams. These engines vary in displacement between 2.5 and 3.4 litres (2,490 and 3,350 cc) and have a cast-iron block and either cast-iron or aluminum heads.

bank. This allows primary mechanical balance to be achieved, without a balance shaft, plus gives an even firing order. 90-degree V8 engines have no offset in the crankpins, which is easier to machine, and it allows primary mechanical balance to be achieved without a balance shaft and it has an even firing order.
