Online Library Acl And Qos Configuration Guide Product Technology

describes how to create IPv4 ACL and IPv6 ACL, use QoS polices to control traffic, and configure

ACL and QoS Configuration Guide

An access control list (ACL) is a set of rules for identifying traffic based on criteria such as source IP address, destination IP address, and port number.

Online Library Acl And Qos Configuration Guide Product Technology

The rules are also called permit or deny statements. ACLs are primarily used for packet filtering. You can also use ACLs in QoS, security, routing, and other modules for identifying traffic.

Online Library Acl And Qos Configuration Guide Product Technology

ACL Overview. An access control list (ACL) is a set of rules (or permit or deny statements) for identifying traffic based on criteria such as source IP address, destination IP address, and port number. ACLs are essentially used for packet filtering. A packet filter drops packets that match a deny rule and permits packets that match a permit rule.
