A large  $K_a$  value indicates a strong acid because it means the acid is largely dissociated into its ions. A large  $K_a$  value

# Acces PDF Am I Small Ngar Ka Thay Nge Lar Childrens Picture Book English Burmese

also means the formation of products in the reaction is favored. A small  $K_a$  value means little of the acid dissociates, so you have a weak acid. The  $K_a$  value for most weak acids ranges from  $10^{-2}$  to  $10^{-14}$ .

If  $K_a$  is small ( $pK_a$  is large), little dissociation has occurred, so the acid is weak. Acids with a  $pK_a$  in the range of -2 to 12 in water are weak acids.  $K_a$  is a better measure of the strength of an acid than pH because adding water to an acid solution doesn't change its acid equilibrium constant, but does alter the  $H^+$  ion concentration and pH.
