Hypoglycemia, also known as low blood sugar, is a fall in blood sugar to levels below normal. This may result in a variety of symptoms, including clumsiness, trouble talking, confusion, loss of consciousness, seizures, or death. Feelings of hunger, sweating, shakiness, or weakness may also be present. Symptoms typically come on quickly.

Hypoglycemia - Wikipedia

During its 57th session, the CND approved a set of recommendations which included: the importance of dealing with the substance use as a disease to be treated, and not as a legal or ethical issue; methods and quality of treatment which should be tailored to the type and intensity of disorder associated with drug abuse; and, that the treatment ...
