Textbooks. The textbook for the course is the world-famous, excellent, but sometimes hard-for-students-to-read book by J. D. Jackson: Classical Electrodynamics, Third Edition, by John David Jackson, John Wiley and Sons, (1998). This is the book with the blue hardcover, where he changed to SI (System-International or meter-kilogram-second-ampere) units for the first 10 chapters.

Integral equations as a generalization of eigenvalue equations. Certain homogeneous linear integral equations can be viewed as the continuum limit of eigenvalue equations. Using index notation, an eigenvalue equation can be written as  $Mv = \lambda v$  where  $M = [M_{ij}]$  is a matrix,  $v$  is one of its eigenvectors, and  $\lambda$  is the associated eigenvalue. Taking the continuum limit, i.e., replacing the discrete ...

This figure is called the Argand diagram, and the plane of the figure is called the Argand plane or

the complex plane. The location of the point in the Argand plane can also be specified using polar coordinates. We use the symbol  $r$  for the distance from the origin to the point, and the symbol  $\phi$  for the angle in radians between the positive real axis and the line segment from the origin to the ...

This differential equation has regular singular points at  $x = \pm 1$  so if a solution is sought using the standard Frobenius or power series method, a series about the origin will only converge for  $|x| < 1$  in general. When  $n$  is an integer, the solution  $P_n(x)$  that is regular at  $x = 1$  is also regular at  $x = -1$ , and the series for this solution terminates (i.e. it is a polynomial).
