### CP-168U Series - PCIe/UPCI/PCI Serial Cards | MOXA

You can do `yes | cp -rf xxx yyy`, but my gutfeeling says that if you do it as root - your `.bashrc` or `.profile` has an alias of `cp` to `cp -i`, most modern systems (primarily RH-derivatives) do that to root profiles.. You can check existing aliases by running `alias` at the command prompt, or which `cp` to check aliases only for `cp`.. If you do have an alias defined, running `unalias cp` will abolish that ...

Emergency situations typically create increased demands for epidemiologic and laboratory resources. Important factors that affect data collection and management during an event response—compared with business as usual—include time constraints; immediate pressure to both collect and instantaneously summarize substantial amounts of data, typically in fewer than 24 hours; limited human ...

### Using Technologies for Data Collection and Management ...

`cp`. This command copies a file, preserving the original and creating an identical copy. If you already have a file with the new name, `cp` will overwrite and destroy the duplicate. For this reason, it's safest to always add `-i` after the `cp` command, to force the system to ask for your approval before it destroys any files. The general syntax for `cp` is: `cp -i oldfile newfile`

### Oracle® VM VirtualBox®

To expand upon Christian's answer, the only reliable way to do this would be to combine `mkdir` and `cp`: `mkdir -p /foo/bar && cp myfile "$_"` As an aside, when you only need to create a single directory in an existing hierarchy, `rsync` can do it in one operation. I'm quite a fan of `rsync` as a much

more versatile cp replacement, in fact:
