Colloids . Particles intermediate in size between those found in solutions and suspensions can be mixed in such a way that they remain evenly distributed without settling out. These particles range in size from  $10^{-8}$  to  $10^{-6}$  m in size and are termed colloidal particles or colloids. The mixture they form is called

## **Solutions, Suspensions, Colloids, and Dispersions**

A colloid is intermediate between a solution and a suspension. While a suspension will separate out a colloid will not. Colloids can be distinguished from solutions using the Tyndall effect.
