Forensic Anthropology Training Manual 3rd

In forensic and archaeological contexts the pelvic girdle is often not complete and sex determination relies upon recording and assessing individual sexually dimorphic features as outlined below. The following criteria are described in most text books on skeletal analysis and here we have synthesised information from both the European and Anglo ...

Bloodstain Pattern Analysis (BPA) is the field of forensic science that consists of the study and analysis of bloodstains at a known or suspected crime scene with the purpose of drawing conclusions about the nature, timing and other details of the crime. It is used mostly to study homicide or other violent crimes in which blood is present and can help in crime scene reconstruction.

Although epidemiologists work in field settings in different contexts, the term field epidemiology as used in this manual describes investigations initiated in response to urgent public health problems. A primary goal of field epidemiology is to guide, as quickly as possible, the processes of selecting and implementing interventions to lessen or prevent illness or death when such problems arise.
