Freshwater ecosystem - Wikipedia

A wetland is a distinct ecosystem that is flooded by water, either permanently (for years or decades) or seasonally (for weeks or months). Flooding results in oxygen-free processes prevailing, especially in the soils. The primary factor that distinguishes wetlands from terrestrial land forms or water bodies is the characteristic vegetation of aquatic plants, adapted to the unique anoxic hydric ...

ecology | Britannica

Introduction to Ecology. Ecology is the study of interaction among living organisms (plants, animals, microbes) as well as interaction with its abiotic environment (temperature, water, air, soil, light, etc.). According to Odum, who is known as the Father of modern ecology, “Ecology is the study of structure and function of ecosystems”.
