Introduction to Information Retrieval

Introduction to Information Retrieval How do you generate the candidates? 1.Run through dictionary, check edit distance with each word 2.Generate all words within edit distance $\leq k$ (e.g., $k = 1$ or 2) and then intersect them with dictionary 3.Use a character k -gram index and find dictionary words that share “most” k -grams with word (e.g., by

Introduction to Information Retrieval

“Information Retrieval is the process of finding desired documents from a collection of documents.” The way this works is that the user inputs his need in the form of text (query) in the information retrieval system. The system then processes this query and finds the relevant documents from the existing collection of documents (corpus).

Information Retrieval using word2vec based Vector Space Model

Automated information retrieval systems are used to reduce what has been called information overload. An IR system is a software system that provides access to books, journals and other documents; stores and manages those documents. Web search engines are the most visible IR applications .

Following recent successes in applying BERT to question answering, we explore simple applications to ad hoc document retrieval. This required confronting the challenge posed by documents that are typically longer than the length of input BERT was designed to handle. We address this issue by applying inference on sentences individually, and then aggregating sentence scores to produce document ...
