The mechanism of sex determination remains poorly understood in hemimetabolous insects. Here, in the brown planthopper (BPH), *Nilaparvata lugens*, a hemipteran rice pest, we identified a feminizing switch or a female determiner (Nifmd) that encodes a serine/arginine-rich protein. Knockdown of Nifmd in female nymphs resulted in masculinization of both the somatic morphology and doublesex splicing.

### A feminizing switch in a hemimetabolous insect

The diagram shows oil droplets floating on the water, as seen using a microscope. ... Draw and label three other structures that would be found in the bacterium. (3) (b) Many different foods have been found to contain Listeria. ... The flower in the diagram is insect-pollinated.
