University of Utah

The Nellhaus recently popped up as a reference chart, so I am wondering if there is anyone still using with the current WHO growth standards that should encompass a multitude of race, ethnicity ...

Is anyone using Nellhaus charts, particularly for head ...

In 1968, Nellhaus published head circumference tables for boys and girls from birth to 18 years of age, calculated from 14 reports in the literature since 1948. 11 He concluded there is no significant racial, national, or geographical difference in head circumference. He prepared graphs for males and females from the calculated grand means and ...

The value of head circumference measurements after 36 ...

Nellhaus male and female head circumference charts for children over 3 years old (I don't love these charts, as the pooled data is from 1948-1965, and is not as "interracial" as advertised, but we don't have many other options for older children). These 2010 United States head circumference growth reference charts: birth to 21 years, by Rollins ...

WHO | Head circumference-for-age

The clinical charts have the grids scaled to metric units (kg, cm), with English units (lb, in) as the secondary scale. Clinical charts are available for boys and for girls. The available clinical charts include the following: Infants, birth to 36 months: Length-for-age and Weight-for-age; Head circumference-for-age and Weight-for-length

Growth Charts - Clinical Growth Charts

The measurement of head circumference (also called occipitofrontal circumference [OFC]) is a direct reflection of head growth and an important step in the evaluation of childhood growth and development. The etiology and evaluation of macrocephaly in infants and children will be discussed here.

UpToDate

Head circumference, or occipitofrontal circumference (OFC), correlates with cognitive function,^{1, 2, 3} intracranial volume,⁴ and brain volume when age and sex are considered.⁵ OFC measurements can detect abnormal brain growth secondary to underlying pathology or help describe a unique phenotype.⁶ More than 500 conditions involving either ...

For information about the use of the IHDP growth charts, see the module, The CDC Growth Charts for Children with Special Health Care Needs. The CDC growth charts show head circumference up to 36 months. For children up to 18 years, charts based on a composite, international sample have been standard for many years (Nellhaus, 1968).

1. Measuring and Plotting Head Circumference

Introduction. Head circumference (HC) is an important measurement which may be an early indicator of intracranial pathology [1]. The aetiology of an abnormal head circumference, e.g. hydrocephalus, can be easily determined with recent advances in medical technology [2]. Therefore, standard HC charts are of value because, unlike other somatic growth parameters even small deviations in HC from ...

United States Head Circumference Growth Reference Charts ...

A percentile of 50% represents the average or mean head circumference. A value below 50 percent means a baby's head circumference is less than the average. A value greater than 50 percent means a baby's head circumference is above average. A doctor or physician should be consulted to determine growth status.

The Bushby et al. adult OFC charts, which correct for adult height, were not used since we analyzed height as a separate variable. OFC standard deviation (OFCSD) values to the nearest 0.1 SD were assigned for each age and head circumference using the Nellhaus charts. Additional lines were drawn to correspond to OFCSD values not on the charts.
