I just bought a used Nikon AF 80-200 f/2.8 D, two ring version with tripod mount. It appears to work fine in AF mode. But when I rotate the A-M ring to M the manual focus ring does not positively engage the focus mechanism. Sometimes it does. Sometimes it slips. Sometimes I need to rotate it to its limits to get it to engage. Once engaged it

M/A focus mode The M/A mode allows switching from autofocus to manual operation, by simply rotating the focus ring, with virtually no time lag. This is a popular option for sports photographers who autofocus on their subject, but who require fine focus with manual control and an instant response to the manual adjustment.

But, a not-as-smooth-as-possible focus is better than a stuck focus ring than might even cause the lens to start dismounting from a screw mount camera/adapter. I started doing this after I took apart a Helios-44M in a hurry and is now frustrated at the sight of it (can't get focus ring, focus helicoid and aperture to re-align correctly, a real bloody 3D puzzle)

### **fast, easy and cheap fix of a stiff focus ring**

Based on the Manual of the lens the autofocus should be active in M/A mode on the lens but you should have the possibility to make always adjustments with the focus ring. There should always be the possibility to do this and to change the focus also if the autofocus is turned on. If it is not working in your case you should consider to take it to a professional and let it check
