The genes GLB1 and GALC encode GLB1 isoform 1 and galactocerebrosidase, respectively, which exhibit β -galactosidase activity in human lysosomes. GLB1 isoform 1 has been reported to play roles in rare lysosomal storage diseases. Further, its β -galactosidase activity is the most widely used biomarker of senescent and aging cells; hence, it is called senescence-associated β -galactosidase.

Aslani et al (2012) identified that attempts to convey the correct information to patients are equally important as providing the medicine(s) themselves to patients. The concept of pharmaceutical care intervention (PCI) was introduced and became established and practiced in the developed world in daily hospital and community pharmacy practice.
