Optics is the branch of physics that studies the behaviour and properties of light, including its interactions with matter and the construction of instruments that use or detect it. Optics usually describes the behaviour of visible, ultraviolet, and infrared light. Because light is an electromagnetic wave, other forms of electromagnetic radiation such as X-rays, microwaves, and radio waves ...

Quantum logic gates are represented by unitary matrices.A gate which acts on qubits is represented by a unitary matrix, and the set of all such gates with the group operation of matrix multiplication is the symmetry group U(2 n).The quantum states that the gates act upon are unit vectors in complex dimensions, where the norm is the modulus squared. The basis vectors (sometimes called ...
