When it came out in 2010, the Nikon 7000 was probably the best camera in this prosumer group. When it first appeared in 2011, the Sony A77 probably displaced the Nikon 7000 as the best semiprofessional camera (although its low light performance was undeniably poor). Olympus may have snagged the crown for a brief period with its OM-D E-M5 in 2012.

The Sony SLT-A77 II is - as the name implies - an overhaul of the original A77, from from 2011. The A77 Mark II features a new autofocus sensor, and it's much more than a refreshed version of an existing design. Instead the A77 II is built around the AF module with the most focus points of any camera on the market (79), covering an extremely wide area of the frame.
