Paired t-test using Stata Introduction. The paired t-test, also referred to as the paired-samples t-test or dependent t-test, is used to determine whether the mean of a dependent variable (e.g., weight, anxiety level, salary, reaction time, etc.) is the same in two related groups (e.g., two groups of participants that are measured at two different "time points" or who undergo two different ...

National study to track the pandemic's effect on year 11 students' life chances. The Centre for Longitudinal Studies (CLS) is part of the team behind a new cohort study of current year 11 students, which will investigate the educational and employment inequalities brought about by the COVID-19 crisis.

CLS

Notice that Stata issues a note, informing us that the variable `yr_rnd` has been dropped from the model due to collinearity. We cannot assume that the variable that Stata drops from the model is the "correct" variable to omit from the model; rather, we need to rely on theory to determine which variable should be omitted.

Lesson 3 Logistic Regression Diagnostics

Every time Jax attacks an enemy he gains 3.5-11% increased attack speed for 2.5 seconds. The percentage is increased every 3 levels (which is at level 1 / 4 / 7 / 10 / 13 / 16). This effect stacks up to 8 times for a maximum of 28-88% bonus attack speed (depending on level) and will still stack if the attack is dodged or missed due to blind.
