Specs for all Triumph Dolomite versions

Triumph Dolomite Sprint engine Triumph added a unique 16-valve cylinder head to the slant-four for the 1973 Dolomite Sprint . At the time there were at British Leyland (BL) both Harry Mundy , who worked on engine development at Jaguar, and Walter Hassan , also at Jaguar but in charge of engine technology development at BL as well.

Triumph slant-four engine - Wikipedia

The Dolomite 1500 was a new half-and-half model, for it shared the same rectangular-headlamp nose as the Dolomite 1300, and also got Dolomite 1850-type suspension, but had the larger 71bhp/1,493cc engine (which was based on that of the current Spitfire), overdrive as optional equipment, brushed nylon cord upholstery, all to a rather simpler equipment standard than the 1500HL.

Triumph Dolomite Introduction - Rimmer Bros

The Dolomite used the longer bodyshell of the front wheel drive Triumph 1500, but with the majority of the running gear carried over from the rear-wheel drive Triumph Toledo. Initially, the only version available used the new slant-four 1854 cc engine, which mated an alloy OHC head to an iron block, providing 91 bhp (68 kW) which offered sprightly performance.

The Triumph Dolomite is a car that was produced by Triumph Motor Company from 1934 to 1940. It first appeared in 1934 as a sports car and the name was also used from 1937 on a series of sporting saloons and open cars until 1939 when the company went into receivership.

Triumph - Triumph Dolomite Straight 8 (1934-1935)

Bore wear is also unusual in these engines if properly maintained. Make sure the front camshaft tunnel in the block isnt worn, hare again a good oil supply would make this unlikely. Remove all the oil gallery plugs and get a long stiff bristle brush and give them a thorough clean.Properly put together this should give nice power and torque, even if you stuck with re-needed 1.75" SUs.

Sprint fast road engine rebuild - The Triumph Dolomite Club

The decision to swap the driven wheels from one end to the other was taken in the late 1960s because Triumph's aim was to take the range upmarket with larger, more powerful engines. Front-wheel drive wasn't going to work with the Dolomite and Sprint's powerplant, so a radical solution was needed.
